

Frontend Feature Recommendations

Workdane Tour and Travel - www.workdane.com

Additional features to make the website more professional, engaging and conversion-focused

Purpose. This document lists user-interface (frontend) features to add to the current homepage-based site. The homepage metadata shows the site was generated with v0.dev, which usually means a React / Next.js and Tailwind CSS codebase, so the tools suggested below fit that stack. Each feature is described by what the visitor sees, followed by a suggested tool or implementation note. Backend items (database, payments, admin panel) are covered separately.

Note on scope. Only the homepage could be reviewed in detail. Please compare these recommendations against the booking, contact, package and service pages, and skip any feature that already exists.

1. Header and Navigation

The header is the most visible part of every page. It should help visitors act in one tap.

Feature	What the visitor sees / does	Suggested tool / note
Sticky header with call-to-action	Header stays visible while scrolling, with 'Get a Quote' and WhatsApp buttons always reachable.	CSS position: sticky; shrink height on scroll.
Mega menu	Menu groups: Services, Packages (by country), Visa Help, Offers, About, Contact.	shadcn/ui NavigationMenu.
Language toggle (EN / Amharic)	One-click switch between English and Amharic across the site.	next-intl or i18next; Noto Sans Ethiopic font.
Currency switcher	Prices shown in ETB, USD or AED at the visitor's choice.	Store rates in config; format with Intl.NumberFormat.
Mobile bottom action bar	Fixed bar on phones with Call, WhatsApp, Quote and Menu icons.	Fixed-position component, shown under 768px.

2. Hero Section and Quick Search

Replace the generic 'Plan Your Journey' banner with a section that starts the booking process immediately.

Feature	What the visitor sees / does	Suggested tool / note
Benefit-led headline with two buttons	Clear line such as 'Visa, flights and tours handled for you' with 'Get Free Quote' and 'Chat on WhatsApp'.	Keep the headline under 12 words.
Tabbed quick-request widget	Tabs for Flight, Hotel, Visa and Package. Each tab has a short form (destination, dates, travelers, phone).	react-hook-form + zod validation.
Rotating hero slider or short video	Three slides for Dubai, Istanbul and Asia, each with its own offer and button.	Swiper.js; compressed WebP or muted MP4.
Promo banner strip	Thin top bar with a current offer and countdown, dismissible.	Content from a config file or CMS.

3. Trust and Credibility Elements

Visitors booking visas and international travel need proof that the company is real and reliable.

Feature	What the visitor sees / does	Suggested tool / note
Animated statistics counter	Numbers such as travelers served, visas processed, countries covered, years of experience.	react-countup; use real figures only.
License and partner badges	Business license number, partner airlines and hotels, payment method logos.	Logo strip with grayscale hover effect.
Google rating badge	Star rating with a 'Leave a review' link.	Link to Google Business Profile.
Team section	Photos, names and roles of staff, with office pictures.	Card grid with hover effect.
Guarantee and policy highlights	Short icons for refund policy, 24/7 support and secure documents.	Icon cards using lucide-react.

4. Destination and Package Cards

Cards should let a visitor compare options quickly and ask about one with a single click.

Feature	What the visitor sees / does	Suggested tool / note
Consistent package card	Photo, destination, duration, price ('from ...'), rating and two buttons: Details and Ask on WhatsApp.	One reusable card component.
Filters and sorting	Filter by country, budget, duration and travel month. Sort by price or popularity.	Client-side filtering with URL query params.
Quick-view modal	Pop-up with highlights and a quote button, without leaving the page.	shadcn/ui Dialog.
Offer badges	Labels such as 'Popular', 'Limited seats' or 'Ends in 3 days'.	Badge component driven by data.
Save and compare	Heart icon to save packages and a side-by-side comparison of two or three.	LocalStorage on the visitor's device.
Cards for every package	Add missing cards for Thailand and Delhi, and for car rental, events and group packages.	Match services shown on social media.

5. Package Detail Page

This page is where most inquiries happen, so it needs complete information and a visible action.

Feature	What the visitor sees / does	Suggested tool / note
Photo gallery with lightbox	Large image grid; tap to enlarge and swipe.	yet-another-react-lightbox.
Day-by-day itinerary accordion	Expandable days with activities, meals and hotel.	shadcn/ui Accordion.
Included / excluded tabs	Clear lists so customers know what the price covers.	Tabs component.
Sticky booking card	Price, date picker, traveler counter and Send Request button that stays visible on scroll.	react-day-picker; bottom sheet on mobile.
Share buttons	Share a package on WhatsApp, Telegram, Facebook or copy the link.	Web Share API with fallback.
Related packages and FAQs	Suggestions at the bottom and package-specific questions.	Filter by same country or price range.

6. Visa Center

Visa services are a core offer and can be presented as a self-service interface.

Feature	What the visitor sees / does	Suggested tool / note
Visa requirement checker	Choose destination and visa type to see documents, fees, processing time and a Start Application button.	Data table in JSON; searchable select.
Document checklist	Tick-off checklist per visa type that can be printed or saved as a PDF.	Checkbox list with progress bar.
Step-by-step process bar	Visual stepper: Consultation, Documents, Submission, Approval, Delivery.	Stepper component.
Application status tracker	Enter reference number and phone to see current status with a timeline.	Needs a backend endpoint; UI is a search form and timeline.
Secure upload area	Drag-and-drop passport and photo upload with file type and size checks and progress indicator.	react-dropzone; show privacy note.

7. Forms and Input Experience

Better forms mean more completed inquiries, especially on mobile.

Feature	What the visitor sees / does	Suggested tool / note
Multi-step quote form	Three short steps (Trip, Travelers, Contact) with a progress indicator.	Reduces abandonment on long forms.
Phone input with country code	Flag selector with +251 and +971 first, and number formatting.	react-international-phone.
Date range picker	Calendar for departure and return, blocking past dates.	react-day-picker.
City and airport autocomplete	Type 'Dub' and choose Dubai (DXB) from suggestions.	cmdk / combobox with a static airport list.
Inline validation and clear errors	Red messages beside each field; success screen after submit with next steps.	zod schema; toast notifications.
Prefilled fields	Package or service name filled automatically when the form is opened from a package page.	Pass values through URL or state.

8. Social Proof and Content

Turn the large TikTok audience and customer stories into visible proof on the website.

Feature	What the visitor sees / does	Suggested tool / note
Testimonial carousel with real photos	Name, photo, trip and specific comment, plus a star rating.	Replace placeholder.svg images.
Video testimonials	Short vertical customer clips, opened in a pop-up player.	Self-hosted MP4 or YouTube embed.
TikTok / Instagram feed	Latest reels displayed in a grid with a Follow button.	Official embed codes or a feed widget.
Traveler gallery	Photo wall of customers at destinations, with permission.	Masonry grid layout.
Blog and guides cards	Latest articles such as visa guides and destination tips with reading time.	MDX or CMS-driven.

9. Engagement Tools

Interactive tools keep visitors on the site and collect leads.

Feature	What the visitor sees / does	Suggested tool / note
Smart floating WhatsApp button	Message changes with the page, e.g. 'I am interested in the Dubai Tour'.	Build the wa.me link from the route.
FAQ accordion and search	Common questions on visas, payments, refunds and documents.	Accordion with search box.
Chatbot or quick-reply widget	Buttons: Visa help, Package price, Flight ticket, Talk to an agent.	Simple rule-based widget first.
Trip budget estimator	Choose destination, days and travelers to see an approximate cost range and request an exact quote.	Client-side calculator using set price ranges.
Exit-intent or timed pop-up	One friendly pop-up offering a free consultation or newsletter signup.	Show once per visit; never on mobile at load.
Newsletter block	Email field with confirmation message and privacy note.	Connect to Brevo or Mailchimp.

10. Visual Polish and Micro-interactions

Small details make the site feel like a professional brand rather than a template.

Feature	What the visitor sees / does	Suggested tool / note
Design system	Fixed brand colors, two fonts, consistent buttons, spacing and icon style on all pages.	Tailwind theme tokens; one logo spelling.
Scroll animations	Sections fade in gently; cards lift on hover.	framer-motion; keep motion subtle.
Skeleton loaders	Gray placeholders while images or data load.	Avoids blank layout jumps.
Toast messages	Small pop-up confirmations: 'Request sent', 'Link copied'.	sonner.
Back-to-top and progress bar	Button after scrolling and a reading progress line on long pages.	Simple scroll listener.
Custom 404 and thank-you pages	Friendly error page with links; thank-you page after each form.	Also useful for conversion tracking.

11. Mobile-first and Performance

Most Ethiopian visitors will arrive from phones and TikTok, often on limited data.

Feature	What the visitor sees / does	Suggested tool / note
Touch-friendly layout	Large buttons (44px+), swipeable carousels, no horizontal scrolling.	Test on real low-end Android phones.
Image optimization	Fast-loading WebP images with correct sizes; hero image under about 200 KB.	next/image; remove ?height= placeholder params.
Lazy loading	Images and videos load only when scrolled into view.	Native loading='lazy'.
Installable web app (PWA)	Option to add the site to the phone home screen; basic offline page.	next-pwa.
Core Web Vitals check	Fast first paint and stable layout.	PageSpeed Insights; target 80+ on mobile.

12. Accessibility, SEO and Analytics (Frontend Side)

These improve reach and let the team measure results.

Feature	What the visitor sees / does	Suggested tool / note
Accessibility basics	Readable contrast, visible focus outlines, alt text on all images, keyboard navigation.	Run Lighthouse accessibility audit.
Unique page titles and descriptions	Each page has its own title, description and share image.	Next.js metadata API.
Structured data	Travel agency, offers and FAQ markup for richer Google results.	JSON-LD scripts.
Event tracking	Track clicks on WhatsApp, phone, quote buttons and form submissions.	Google Analytics 4, Meta Pixel, TikTok Pixel.
Footer upgrade	Clean columns, payment logos, legal links, social icons in the header area and a link-in-bio style Quick Links block.	Add privacy, terms and refund pages.

Pages to Add

About and Team; Offers; Destinations index; Visa Center; Car Rental; Event Planning; Group Packages; Soto Ticket information; Gallery; Blog; FAQ; Contact (with hours and map); Privacy Policy; Terms and Refund Policy; Thank-you page; 404 page.

Suggested Implementation Roadmap

Phase	Frontend work	Expected result
Phase 1 (Weeks 1-2)	Header CTAs, mobile action bar, smart WhatsApp button, hero rewrite, replace placeholder images, footer cleanup	Immediate lift in professionalism and inquiries
Phase 2 (Weeks 3-4)	Package cards and detail pages, multi-step quote form, phone input and date picker, testimonials with real photos	More complete, higher-quality leads
Phase 3 (Month 2)	Visa Center, FAQ, trust section, TikTok feed, blog cards, event tracking	Authority, SEO traffic and measurable results
Phase 4 (Month 3)	Amharic language, currency switcher, chatbot, budget estimator, PWA, accessibility polish	Wider reach and repeat visitors

Important: use only real photos, real reviews and real figures. Fake or placeholder content damages trust more than having fewer sections. Fix the brand name spelling (Workdan / Workdane) and the contact details before adding new features.
